

*Albizia lebbbeck*  [简体中文](#) [正體中文](#)

**System:** Terrestrial

| Kingdom | Phylum        | Class         | Order   | Family   |
|---------|---------------|---------------|---------|----------|
| Plantae | Magnoliophyta | Magnoliopsida | Fabales | Fabaceae |

## Common name

## Synonym

*Acacia lebbbeck* , (Linnaeus) Willd.  
*Mimosa lebbbeck* , L.

## Similar species

## Summary

*Albizia lebbbeck* probably originated in tropical Asia and was introduced for forestry or erosion control in many countries. Fast-growing and reaching 18 to 30m in height, it is now naturalised mainly in dry tropical regions and can invade natural and semi-natural environments, as is the case in Mayotte and La Réunion.

[view this species on IUCN Red List](#)

## Management Info

Preventative measures: A [Risk Assessment of \*Albizia lebbbeck\*](#) prepared for Australia resulted in a score of 4 and a recommendation of: "the plant requires further evaluation"

A [Risk Assessment of \*Albizia lebbbeck\*](#) for Hawai'i and other Pacific islands was prepared by Dr. Curtis Daehler (UH Botany) with funding from the Kaulunani Urban Forestry Program and US Forest Service. The alien plant screening system is derived from Pheloung *et al.* (1999) with minor modifications for use in Pacific islands (Daehler *et al.* 2004). The result is a score of 7 and a recommendation of: "Likely to cause significant ecological or economic harm in Hawai'i and on other Pacific Islands as determined by a high WRA score, which is based on published sources describing species biology and behaviour in Hawai'i and/or other parts of the world."

Physical: Seedlings and saplings can be pulled out by hand or dug out. It is recommended to cut larger trees and treat the stumps with herbicide

Chemical: Kline & Duquesnel (1996) recommend the following herbicide treatment and application for effective control of *Albizzia lebbbeck*:

- Method: Basal / Herbicide: Garlon 4 / Concentration: 10% / Effectiveness: Good
- Method: Cut surface / Herbicide: Garlon 4 / Concentration: 10% / Effectiveness: Moderate
- Method: Cut surface / Herbicide: Garlon 3A / Concentration: 50% / Effectiveness: Moderate

### Management information

[IUCN/SSC Invasive Species Specialist Group \(ISSG\), 2010. A Compilation of Information Sources for Conservation Managers.](#)

**Summary:** This compilation of information sources can be sorted on keywords for example: Baits & Lures, Non Target Species, Eradication, Monitoring, Risk Assessment, Weeds, Herbicides etc. This compilation is at present in Excel format, this will be web-enabled as a searchable database shortly. This version of the database has been developed by the IUCN SSC ISSG as part of an Overseas Territories Environmental Programme funded project XOT603 in partnership with the Cayman Islands Government - Department of Environment. The compilation is a work under progress, the ISSG will manage, maintain and enhance the database with current and newly published information, reports, journal articles etc.

[CONABIO. 2008. Sistema de información sobre especies invasoras en México. Especies invasoras - Plantas. Comisión Nacional para el Conocimiento y Uso de la Biodiversidad. Fecha de acceso.](#)

**Summary:** English:

The species list sheet for the Mexican information system on invasive species currently provides information related to Scientific names, family, group and common names, as well as habitat, status of invasion in Mexico, pathways of introduction and links to other specialised websites. Some of the higher risk species already have a direct link to the alert page. It is important to notice that these lists are constantly being updated, please refer to the main page (<http://www.conabio.gob.mx/invasoras/index.php/Portada>), under the section Novedades for information on updates.

Invasive species - Plants is available from: [http://www.conabio.gob.mx/invasoras/index.php/Especies\\_invasoras\\_-\\_Plantas](http://www.conabio.gob.mx/invasoras/index.php/Especies_invasoras_-_Plantas) [Accessed 30 July 2008]

Spanish:

La lista de especies del Sistema de información sobre especies invasoras de México cuenta actualmente con información acerca de nombre científico, familia, grupo y nombre común, así como el hábitat, estado de la invasión en México, rutas de introducción y ligas a otros sitios especializados. Algunas de las especies de mayor riesgo ya tienen una liga directa a la página de alertas. Es importante resaltar que estas listas se encuentran en constante proceso de actualización, por favor consulte la portada (<http://www.conabio.gob.mx/invasoras/index.php/Portada>), en la sección novedades, para conocer los cambios.
