

Pelophylax lessonae

System: Freshwater_terrestrial

| Kingdom | Phylum | Class | Order | Family |
|----------|----------|----------|-------|---------|
| Animalia | Chordata | Amphibia | Anura | Ranidae |

Common name Pool frog (English), Rana Verde Minore (Italian), Little Water Frog (English), Green Frog (English), Common Water-frog (English), Italian Pool Frog (English), Italian hybrid Frog (English), Rana di Lessona (Italian), Zaba Jeziorkowa (Polish), Prudovaya Lyagushka (Russian)

Synonym *Rana esculenta* ,Linnaeus, 1758
Rana hispanica ,Fitzinger, 1826
Rana lessonae ,Camerano, 1882
Rana viridis ,Linnaeus, 1761
Rana lessonae pannonica ,Karaman, 1948
Hylarana lessonae ,(Camerano, 1882)
Rana esculenta lessonae ,Camerano, 1882
Rana esculenta bolkayi ,Fejérváry, 1909
Rana esculenta hungarica ,Toutain, 1966
Rana lessonae lessonae ,Camerano, 1882

Similar species

Summary Pool frogs *Pelophylax lessonae*, have been found to be hosts of the Chytrid fungus, *Batrachochytrium dendrobatidis* and co-occurring native amphibians have also tested positive. There is a concern of disease transmission.

Habitat Description

"This species is present in deciduous and mixed forests, forest steppe, steppe, bush lands (e.g. riparian alder groves), meadows, fields and fens. It may often be found in shallow stagnant waterbodies (usually without fish) such as lakes, ponds, swamps, large puddles, clay and gravel pits, and ditches, often covered with dense herbaceous vegetation. It is not very adaptable, but can occur in slightly modified habitats. It breeds in these wetlands, but may be found hibernating away from waterbodies" (IUCN SSC Amphibian Specialist Group. 2022)
