

Centaurea melitensis [简体中文](#) [正體中文](#)

System: Terrestrial

Kingdom	Phylum	Class	Order	Family
Plantae	Magnoliophyta	Magnoliopsida	Asterales	Asteraceae

Common name Abremanos (Spanish), Malteser Flockenblume (German), Napa thistle (English), Maltese star thistle (English), Croix de Malte (French), tocalote (English)

Synonym

Similar species *Centaurea solstitialis*, *Centaurea sulphurea*

Summary *Centaurea melitensis* is a herb of the family Asteraceae. *C. melitensis* is native to Africa and Europe and was introduced to the United States. It is a highly competitive species that forms dense, impenetrable stands that displaces native and desirable vegetation. *C. melitensis* usually invades open, disturbed sites and is often spread by humans and livestock *via* transportation of contaminated crop seed or hay.

[view this species on IUCN Red List](#)

Uses

Centaurea melitensis is used for medicinal purposes in Spain.

General Impacts

When star thistle infestations are high, native species can experience drought conditions even in years with normal rainfall (Gerlach *et al.*, 1998, in DiTomaso, 2001). It has also been observed to significantly reduce the seed production of the 'Threatened' San Diego thornmint (*Acanthomintha ilicifolia*) (E. Bauder, unpublished data, in DiTomaso, 2001).

Pathway

Human influences, including vehicles, contaminated crop seed or hay, road maintenance, and moving livestock, can also contribute to rapid and long distance spread of the seeds (DiTomaso, 2001).

General information

CONABIO. 2008. *Sistema de información sobre especies invasoras en México. Especies invasoras - Plantas. Comisión Nacional para el Conocimiento y Uso de la Biodiversidad. Fecha de acceso.*

Summary: English:

The species list sheet for the Mexican information system on invasive species currently provides information related to Scientific names, family, group and common names, as well as habitat, status of invasion in Mexico, pathways of introduction and links to other specialised websites. Some of the higher risk species already have a direct link to the alert page. It is important to notice that these lists are constantly being updated, please refer to the main page (<http://www.conabio.gob.mx/invasoras/index.php/Portada>), under the section Novedades for information on updates.

Invasive species - Plants is available from: http://www.conabio.gob.mx/invasoras/index.php/Especies_invasoras_-_Plantas [Accessed 30 July 2008]

Spanish:

La lista de especies del Sistema de información sobre especies invasoras de México cuenta actualmente con información acerca de nombre científico, familia, grupo y nombre común, así como hábitat, estado de la invasión en México, rutas de introducción y ligas a otros sitios especializados. Algunas de las especies de mayor riesgo ya tienen una liga directa a la página de alertas. Es importante resaltar que estas listas se encuentran en constante proceso de actualización, por favor consulte la portada (<http://www.conabio.gob.mx/invasoras/index.php/Portada>), en la sección novedades, para conocer los cambios.
