

Micropterus salmoides  [简体中文](#) [正體中文](#)

System: Freshwater

Kingdom	Phylum	Class	Order	Family
Animalia	Chordata	Actinopterygii	Perciformes	Centrarchidae

Common name lobina negra (Spanish, Mexico), achigan (French), American black bass (English), green bass (English), bas dehanbozorg (Farsi), bass (English), bass wielkebowy (Polish), black bass (English), bolsherotnyi amerikanskii tscherny okun (Russian), achigã (Portuguese), achigan à grande bouche (French), bol'sheroty chernyi okun' (Russian), forelbaars (Dutch), forellenbarsch (German), green trout (English), huro (Spanish), khorshid Mahi Baleh Kuchak (Farsi), lakseabbor (Norwegian), largemouth black bass (English), northern largemouth bass (English, Canada), ostracka (Czech), großmäuliger Schwarzbarsch (German), okounek pstruhový (Czech), Ørredaborre (Danish), perche noire (French), perche truite (French), stormundet black bass (Danish), tam suy lo ue (Cantonese), zwarte baars (Dutch), lobina-truche (English, Dominican Republic), buraku basu (Japanese), biban cu gura mare (Romanian), perca Americana (Spanish), persico trota (Italian), isobassi (Finnish), perche d'Amérique (French), stormundet ørredaborre (Danish), bas wielkogeby (English, Poland), okuchibasus (Japanese), largemouth bass (English), fekete sügér (Hungarian), ostracka lososovitá (Slovak), Öringsaborre (Swedish)

Synonym *Labrus salmoides* , Lacepède, 1802
Huro salmoides , (Lacepède, 1802)
Aplites salmoides , (Lacepède, 1802)
Perca nigricans , (Cuvier, 1828)
Micropterus salmoides , (Lacepède, 1802)
Huro nigricans , Cuvier, 1828
Grystes megastoma , Garlick, 1857

Similar species

Summary *Micropterus salmoides* (bass) has been widely introduced throughout the world due to its appeal as a sport fish and for its tasty flesh. In some places introduced *Micropterus salmoides* have affected populations of small native fish through predation, sometimes resulting in the their decline or extinction. Its diet includes fish, crayfish, amphibians and insects.

[view this species on IUCN Red List](#)

Species Description

Dorsal spines (total): 10-10; Dorsal soft rays (total): 12-14; Anal spines: 3-3; Anal soft rays: 10-12; Vertebrae: 30-32. Mouth large; maxillary extending beyond the eye. Pelvic fins not joined by a membrane. Green to olive dorsally, milk-white to yellow ventrally, with a black band running from the operculum to the base of the caudal fin. Caudal fin rounded. Caudal fin with 17 rays .\" (FishBase, 2003)

FULL ACCOUNT FOR: *Micropterus salmoides*

Notes

Micropterus salmoides is the most popular game fish in the United States; a recreational fishery that is worth millions of dollars. Preyed upon by herons, bitterns, and kingfishers. Excellent food fish. (FishBase, 2003)

Lifecycle Stages

Spawning takes place spring to summer or when temperature reaches 15°C. Adults mate between the age of 5-12 years (FishBase, 2003).

Uses

Fisheries; minor commercial, aquaculture; commercial, gamefish, aquarium: show aquarium. (FishBase, 2003)

Habitat Description

Inhabits clear, vegetated lakes, ponds, swamps. Also in backwaters and pools of creeks and rivers. Prefers quiet, clear water and over-grown banks. (FishBase, 2003). Largemouth bass are highly adaptable fish, able to thrive in virtually every warm-water habitat, from small creeks to large rivers to huge reservoirs. About the only thing that limits them is cold annual water temperatures (<10C) or low pH (<6), both of which presumably inhibit reproduction, since adults can survive in both habitats, but populations will not persist.

Reproduction

The male which becomes aggressive and territorial builds the nest on muddy bottoms of shallow water. A female may spawn with several males on different nests. The male guards and fans the eggs. (FishBase, 2003)

Nutrition

Food habits of *Micropterus salmoides* are very diverse, but mainly consist of fish or invertebrates. Sometimes cannibalistic. Does not feed during spawning; as well as when the water temperature is below 5°C and above 37°C (FishBase, 2003). Well-known communities involve either LMB and bluegill (*Lepomis macrochirus*) or LMB and shad (*Dorosoma* spp). Much work has been done on the dynamics of these two communities. The LMB-BG communities tend to be more in the northern natural lakes, whereas the LMB-shad communities are more common in large southern reservoirs.

General Impacts

Introduced bass usually affect populations of small native fishes through predation, sometimes resulting in the decline or extinction of such species (Minckley 1973, in Fuller, 1999). Studies have shown that largemouth bass are capable of displacing native species, even predatory species such as northern pike.(USGS-CERC, 2004)

Pathway

This species has been an important sport fish for many years and as such has been stocked widely in areas where it is nonindigenous. (Fuller, 1999)Fishing and Angling

Trilateral Risk Assessment Guidelines for Aquatic Alien Invasive Species. Commission for Environmental Cooperation. 393. rue St-Jacques Ouest, Bureau 200, Montréal \(Québec\), Canada. ISBN 978-2-923358-48-1.](#)

Summary: In 1993, Canada, Mexico and the United States signed the North American Agreement on Environmental Cooperation (NAAEC) as a side agreement to the North American Free Trade Agreement (NAFTA). The NAAEC established the Commission for Environmental Cooperation (CEC) to help the Parties ensure that improved economic efficiency occurred simultaneously with trilateral environmental cooperation. The NAAEC highlighted biodiversity as a key area for trilateral cooperation. In 2001, the CEC adopted a resolution (Council Resolution 01-03), which created the Biodiversity Conservation Working Group (BCWG), a working group of high-level policy makers from Canada, Mexico and the United States. In 2003, the BCWG produced the Strategic Plan for North American Cooperation in the Conservation of Biodiversity. This strategy identified responding to threats, such as invasive species, as a priority action area. In 2004, the BCWG, recognizing the importance of prevention in addressing invasive species, agreed to work together to develop the draft CEC Risk Assessment Guidelines for Aquatic Alien Invasive Species (hereafter referred to as the Guidelines). These Guidelines will serve as a tool to North American resource managers who are evaluating whether or not to introduce a non-native species into a new ecosystem. Through this collaborative process, the BCWG has begun to implement its strategy as well as address an important trade and environment issue. With increased trade comes an increase in the potential for economic growth as well as biological invasion, by working to minimize the potential adverse impacts from trade, the CEC Parties are working to maximize the gains from trade while minimizing the environmental costs.
