

## **GLOBAL INVASIVE SPECIES DATABASE**

EICAT profile: Melopsittacus undulatus

## MC (Minimal Concern)Melopsittacus undulatus

Date assessed 2021-10-01 Year published 2022 MC (Minimal Concern) **Eicat category Justification for EICAT** assessment Whilst Budgerigars are present in the U.S.A. and may compete with other bird species for resources, to date this competition has not been shown to have negative affects on native species (Lever 2005; Florida Fish and Wildlife Conservation Commission 2015; Wenner et al., 1984). Confidence rating Low Competition Mechanism(s) of maximum impact Countries of most severe U.S.A. impact Description of impact The Budgerigar competes with native species for food and nesting sites in Florida but adverse impacts have yet to be identified. Thomas Evans; Tom Allmert **Assessor Contributors Reviewers EICAT** authority Thomas Evans; Tom Allmert. (2025). Melopsittacus undulatus . IUCN Environmental Impact Classification **Recommended citation** for Alien Taxa (EICAT).
