

MN (Minor) *Fejervarya kawamurai*

Date assessed	2020-09-01
Year published	2021
Eicat category	MN (Minor)
Justification for EICAT assessment	Although <i>F. kawamurai</i> largely preys on arthropods, it is uncertain whether the prey is of native or non-native origin (Takeuchi et al. 2019). There also has been no indication of population decline of any species consumed by <i>F. kawamurai</i> .
Confidence rating	Low
Mechanism(s) of maximum impact	Predation
Countries of most severe impact	Japan
Description of impact	Predation - stomach content showed that the Japanese Rice Frog (<i>F. kawamurai</i>) preys primarily on arthropods, but also other taxa. However, prey was not identified to the species level.
Assessor	Alexander D. Rebelo; James Baxter-Gilbert
