MN (Minor)Glandirana rugosa

Date assessed	2020-09-01
Year published	2021
Eicat category	MN (Minor)
Justification for EICAT assessment	G. rugosa is a predator that preys on both native and non-native species, the decline in population size of endemic Hawaiian insects and snails can not be attributed to the presence of G. rugosa alone (Van Kleeck & Holland 2018). However it is likely that G. rugosa preys on native species and effects the performance of native individuals.
Confidence rating	Low
Mechanism(s) of maximum impact	Predation
Countries of most severe impact	U.S.A.
Description of impact	Predation- In Hawai'I, the Japanese wrinkled frog, Glandirana rugosa preys on insects and snails.
