

MN (Minor) *Glandirana rugosa*

Date assessed	2020-09-01
Year published	2021
Eicat category	MN (Minor)
Justification for EICAT assessment	<i>G. rugosa</i> is a predator that preys on both native and non-native species, the decline in population size of endemic Hawaiian insects and snails can not be attributed to the presence of <i>G. rugosa</i> alone (Van Kleeck & Holland 2018). However it is likely that <i>G. rugosa</i> preys on native species and effects the performance of native individuals.
Confidence rating	Low
Mechanism(s) of maximum impact	Predation
Countries of most severe impact	U.S.A.
Description of impact	Predation- In Hawai'i, the Japanese wrinkled frog, <i>Glandirana rugosa</i> preys on insects and snails.
