

GLOBAL INVASIVE SPECIES DATABASE

EICAT profile: *Scinax quinquefasciatus*

MN (Minor) *Scinax quinquefasciatus*

Date assessed	2021-05-10
Year published	2021
Eicat category	MN (Minor)
Justification for EICAT assessment	The impact caused by <i>Scinax quinquefasciata</i> is minor, with individuals of several orders of invertebrates being eaten (Moretta-Urdiales et al. 2020). Native population sizes have not been assessed. Thus the impact magnitude through predation of native invertebrates is minor.
Confidence rating	Low
Mechanism(s) of maximum impact	Predation
Countries of most severe impact	Ecuador
Description of impact	Predation - <i>Scinax quinquefasciata</i> has been shown to predate on the native invertebrates in the lagoons of the Galápagos Islands.
