

MC (Minimal Concern) *Acacia sclerosperma*

Date assessed	2022-05-01
Year published	2023
Eicat category	MC (Minimal Concern)
Justification for EICAT assessment	A. sclerosperma has been shown to be an effective host of a nematode which can infect many different plant species (Ibrahim & Aref, 2000).
Confidence rating	Low
Mechanism(s) of maximum impact	Transmission of diseases to native species
Countries of most severe impact	Saudi Arabia
Description of impact	Transmission of disease to native species - <i>Acacia sclerosperma</i> and other <i>Acacia</i> species were found to be good hosts of <i>Meloidogyne javanica</i> (pathogen).
Assessor	Sabrina Kumschick
Contributors	
Reviewers	EICAT authority
Recommended citation	Sabrina Kumschick. (2025). <i>Acacia sclerosperma</i> . IUCN Environmental Impact Classification for Alien Taxa (EICAT) .
