MN (Minor)Cacatua tenuirostris

Date assessed	2021-10-08
Year published	2023
Eicat category	MN (Minor)
Justification for EICAT assessment	The Long-billed Corella poses an environmental threat to Black cockatoos by out-competing for nest sites, their ability to remove eggs from the nest hollow and to kill and maim advanced nestling. There is no evidence that this has cause a decline of these species (Western Australia Museum, 2015).
Confidence rating	Low
Mechanism(s) of maximum impact	Competition; Predation
Countries of most severe impact	Australia
Description of impact	The Long-billed Corella competes with native bird species, kills nestlings of Black Cockatoos and causes damage to their roosting trees in Western Australia.
Assessor	Thomas Evans; Tom Allmert
