MC (Minimal Concern)Streptopelia roseogrisea

Date assessed	2021-10-01
Year published	2022
Eicat category	MC (Minimal Concern)
Justification for EICAT assessment	The African Collared-dove has been observed feeding on native plant species in Australia. There is no evidence that this has caused declining populations of native species (Paton and Barrington 1985).
Confidence rating	Low
Mechanism(s) of maximum impact	Grazing/herbivory/browsing
Countries of most severe impact	Australia
Description of impact	The African Collared-dove feeds on native plant species.
Assessor	Thomas Evans; Tom Allmert
Contributors	
Reviewers	EICAT authority
Recommended citation	Thomas Evans; Tom Allmert. (2026). *Streptopelia roseogrisea* . IUCN Environmental Impact Classification for Alien Taxa (EICAT).
