

MC (Minimal Concern)*Psittacara mitratus*

<b>Date assessed</b>	2021-10-12
<b>Year published</b>	2023
<b>Eicat category</b>	MC (Minimal Concern)
<b>Justification for EICAT assessment</b>	The Mitred Parakeet has been observed to displace Great Frigatebirds ( <i>Fregata minor</i> ) from roosting areas and to compete with shearwaters ( <i>Puffinus</i> spp) and petrels ( <i>Pterodroma</i> spp.) for nesting sites in cliff-side burrows. There is no evidence that this has affected the performance of these species (MISC 2002).
<b>Confidence rating</b>	Low
<b>Mechanism(s) of maximum impact</b>	Competition
<b>Countries of most severe impact</b>	U.S.A.
<b>Description of impact</b>	The Mitred parakeet competes with native bird species on Maui.
