

## **GLOBAL INVASIVE SPECIES DATABASE**

EICAT profile: Turdus merula

## MO (Moderate) Turdus merula

2021-10-04 **Date assessed** 2023 Year published MO (Moderate) **Eicat category Justification for EICAT** assessment The New Zealand Placostylus (Placostylus bivaricosus) is preyed on by Eurasian Blackbirds, which is causing the decline of this species. Other causes for the decline include habitat clearing and modification, predation and habitat disturbance by other exotic fauna species and possibly herbicide and pesticide use. There is no evidence that this has caused a local extinction of these species (NSW National Parks and Wildlife Service 2001, Threatened Species Scientific Committee). Confidence rating Iow Predation Mechanism(s) of maximum impact **Countries of most severe** Australia impact Description of impact The Eurasion Blackbird feeds on the native flora and fauna, causing the decline of the Lord Howe Placostylus in New Zealand. It also spreads the seeds of invasive plant species. Thomas Evans; Tom Allmert **Assessor Contributors** Reviewers EICAT authority Recommended citation Thomas Evans; Tom Allmert. (2025). Turdus merula . <u>IUCN Environmental Impact Classification for Alien</u> Taxa (EICAT).
